Shown below is a Chime visualization of various physical characteristics of Biotin

Biotin ($C_{10}H_{16}N_2O_3S_1$) is a colorless vitamin that, when crystallized, is orthorhombic (space group $P 2_1 2_1 2_1$). It has a molecular weight of 224.31 g/mol. It is also known as coenzyme R (CoR), Bios II, and Bioepiderm. Some studies refer to biotin as a growth factor present in small amounts in every living cell.
